

Reflection on Assignment 1 – NALI 2023

On 07 & 08/12/2023, our group had visit NALI 2023 at Dewan Sultan Iskandar, UTM. NALI 2023 is an exhibition about Information and Commutation Technology. Exhibitions like NALI are great opportunities for individuals and groups to explore new technologies, products, and services, as well as to network with professionals and experts in the ICT industry. It would be useful to reflect on what we learned and how it might be applicable to your group's interests or goals. Moreover, the exhibition underscored a prevalent industry trend toward sustainable and eco-friendly ICT solutions, with many exhibitors emphasizing their commitment to green technologies. In this assignment, we are instructed to interview booth which promoted and implemented new era of learning and teaching skill. We interviewed 5 booth which we think is the best out of all, which are PROBASED, EXPERIENTIAL LEARNING THROUGH GAMIFICATION, UTM ECO Mobile App: Biodiversity Geo-tagged Ecotourism on UTM Campus, Mini Industry NXT-PRIME: Burger Factory and Archvision VR: Empowering Next-Gen Architects Through Immersive Design Pedagogy.

In my opinion, improvement which can be made for NALI 2023 is the selection of venue and the time. This is because the exhibition and the talks took place in the same hall causing trouble for visitor to visit and listen to the presenter when there is a talk. Other than that, I think there are not much of problem.

Overall, NALI 2023 surpassed expectations, providing a rich learning experience and inspiring considerations for the integration of new technologies into our group's initiatives.
