

Reflection on PC Assemble Lab

On 03/12/2023, we had a PC Assemble Lab session at Makmal Inovasi, N28. This hands-on experience provided us with valuable opportunities to delve into the fundamentals of assembling a PC. The session focused on essential components, including RAM, PC motherboard, PC Fan, Power Supply, and more. By actively engaging in the assembly process, we gained practical insights into the inner workings of a computer and the interplay between its various components. This hands-on approach not only enhanced our understanding of the hardware aspects but also equipped us with practical skills that are foundational for anyone venturing into the field of computer science or technology. The whole process went smooth and very fun, we all enjoyed it very much.

The lab session provided us general knowledge about a PC which is very important as a student of computer sciences. Only by knowing the basics fundamentals and working principle of a PC, we are able to improve it in the future.
